

HUNAT to Showcase Cadence and Tela lighting at FIND – Design Fair Asia 2025, Singapore, 11-13 September 2025 — Czech lighting studio **HUNAT**, renowned for its bespoke lighting sculptures crafted from Bohemian hand-blown crystal, will present its latest work at **FIND – Design Fair Asia 2025**. At the fair, the studio will unveil two of its latest pieces: **Cadence** and **Tela**, each exploring a distinct conceptual language through the use of crystal and light.

Cadence

Cadence explores the subtle rhythm hidden within geometry and repetition. Half and quarter circles drift in deliberate sequences, each forming a note in a larger composition. Together, these arcs create a visual tempo, shifting perspectives and layering light into quiet harmonies. Every element is sculpted from Bohemian hand-blown crystal, shaped in precision moulds and refined by artisans. Custom metal fittings hold each piece in elegant suspension, concealing integrated LED illumination. Semi-transparent metallics and iridescent finishes bring depth and gentle optical complexity, transforming glass into waves of luminous colour. **Cadence** is an ornamental structure where fragments unite into a rhythm of light, form, and contemporary design.

Tela

A study in structure and precision, **Tela** embodies the quiet elegance of crystallisation. Hand-blown Bohemian crystal blocks, elongated and pristine, are suspended within a refined metal framework, forming a luminous grid that defines space with light. Balanced between order and fluidity, the design evokes the moment when structure emerges from emptiness. More than a lighting piece, **Tela** is an architectural presence—an interplay of glass, metal, and radiance that transforms absence into form.

About HUNAT

Founded in the Czech Republic, **HUNAT** designs and manufactures exclusive hand-crafted lighting from Bohemian crystal. Each piece is individually made by master artisans using traditional glassmaking techniques, reimagined through contemporary design and experimental finishes. With a focus on bespoke projects, the studio collaborates with architects and interior designers worldwide, creating sculptural lighting for private residences, hospitality interiors, and cultural spaces.
