Presenting a new season collection with
timeless style and durability at its core

Keta USB

Offering optimum functionality, our latest collection presents versatile lighting designs in a harmonious material palette.

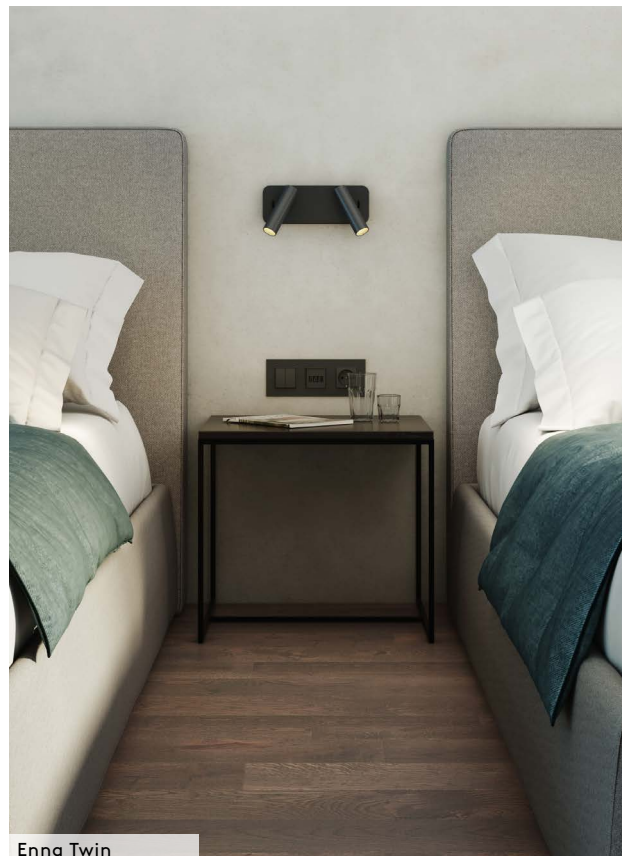

Sitting confidently within any project, the collection features statement glass finishes, contemporary readers, and atmospheric wall lights, each showcasing our signature detailing and quality manufacturing techniques.

The collection

Versatile Reading Lights

A decade in development, the highly anticipated Keta USB reading light, is a marvel of engineering. This streamlined form, which fits flush against the wall when not in use, can be mounted vertically or horizontally and switches off automatically when docked in its discreet cradle. Like all Astro reading lights, glare-free illumination enhances its delicate presence and is perfect for smaller spaces.

Delivering on function as well as aesthetics, Enna Twin is a smart solution for mounting over a double bed or between twin beds. An adaptation of the popular Enna Reader, this new Twin variation features two individually switched cylinder heads so low-glare light can be targeted without disturbing fellow sleepers. It features a slender, seamless silhouette and comes in matt black, matt white and metallics to suit a variety of settings.

Edward Collection

Atmospheric Wall Lights

Sought after for their subtle impact in hotel guest rooms, bars and restaurants, as well as domestic projects, our established wall light offering provides endless choice.

The Edward collection which has been designed specifically for hospitality settings, adding a sophisticated glow especially to hotel bedrooms. A traditional style filtered through a modern lens, its decorative details are pared down in favour of clean, fluid lines. It pairs with our Tapered Drum 155 shade in fabric or metal finishes, allowing for dramatically different looks depending on the combinations chosen.

Mindfully created in multiple variations, the range includes a striking desk lamp, a single wall light, and a twin wall light, each purposefully designed at a larger scale to create an impression in spacious interiors. Each piece features the same robust die-cast construction, in matt black with light-reflecting matt gold details.

The Do-It-All Pendant

Selected for its ability to conjure ambience and delicately reflect light, glass plays a lead role in the Astro material library and is truly celebrated in the Curve. Crafted from hand-blown glass in a rich, sophisticated smoke hue, the Curve shade creates a relaxed feel and is perfect for hanging singularly beside a bed in hotel guest rooms. Available in two sizes and designed to be installed with our Pendant Suspension Kit 3, its unique elliptical form looks striking in both modern and more traditional settings.

Curve Glass

Contemporary Silhouettes

Consistent with the Astro quality standard and refined aesthetic, this new season collection welcomes more organic influences in the form of subtly curved edges and richly rounded shapes.

The new Taiko ceiling light is a boldly curved bell shape designed to appear as though it's floating. Versatile enough to use in hotel guest bedrooms or communal areas such as corridors, it's crafted from spun steel and comes in matt black or white for an understated yet contemporary look.

Epitomising organic curves, the highly anticipated Aquina wall and ceiling light, softens a scheme and can be mounted facing upwards or downwards. Ideal beside a mirror where it serves both as task and ambient lighting, it features a blown glass shade and gently rounded metal arm, finished in either polished chrome or matt black.

Statement Essentials

A clean, contemporary illuminated magnifying mirror, the robust Nagoya is an invaluable lighting solution for any bathroom. Incorporating a wave sensor, the first in the Astro mirror light portfolio, the hands-free activation and fully adjustable arm and neck direct the mirror exactly where it's required, perfect for shadow-free task lighting.

New for spring/summer, Zeppo is an elegant alternative to a flush-mounted ceiling light. The elliptical shade, reminiscent of a Zeppelin airship, is crafted from striking blown

astro

opal glass and finished in a sleek matt black finish. Intended to be the main light source in a space, it provides ambient illumination and has an IP44 rating for safe use in bathrooms.

"Our latest lighting products demonstrate the attention to detail and commitment to timeless design that we champion here at Astro. This is a collection of considered designs and quality manufacturing; lighting that will integrate seamlessly into any project, from hospitality to high-end residential spaces."

Riley Sanders, Head of Design.

About Astro

Inspired by architectural details and modern engineering, after 25 years Astro's view of what makes good design remains the same: that every design should be made to last. Whether bathroom, interior, or exterior lighting, our commitment to long-lived, repairable, and recyclable lighting ensures every luminaire is created to stand the test of time in both design and quality. Known for timeless, pared-down aesthetics, each Astro product is created using the best possible materials and techniques to deliver contemporary lighting for hospitality and residential spaces.
