

Mastering the Landscape with Vision and Precision

Automate and simplify complex processes with VisionPlus for a seamless and efficient workflow.

ESSENTIAL TOOLS FOR SURVEYORS

VisionPlus is developed by surveyors for surveyors. Paired with AutoCAD®, Microstation®, Civil3D®, AutoCAD Map®, and BricsCAD®, VisionPlus is the essential tool for managing your projects efficiently and accurately.

Supported Hardware	Windows 10 and 11, 64 bits French and English version
Compatibility	Autodesk, BrisCAD®, Bentley
Training	Yes
Native Storage Format	SQLite
Input Formats	LandXML, JXL, LAS, RAW, JOB, GDT and Others
Export Formats	dwg, dxf, dgn, LandXML, Civil3D objects, GeoJson, ORD and others
Managed object types	 Cogo point Feature codes Notes (text, photos) Chains (Feature Line) Parcel (Polygone) Building Surface
CAD representation of the objects	 Drawing Layers Styles Symbols (blocks, Cells) Lines and multi-lines Polyline Text/multi-text (annotations) Spline
Errors detection tools	Field Data observationsCrossing breaklinesParcels conformityOthers
Modification follow up	Transaction files
Specific deliverables tools	 Certificate of localisation Lots description Building implantation Profile plan Cross section plan Volume calculation

WHY VISIONPLUS STANDS OUT

Standards Compliance

VisionPlus supports any government-issued standards for land surveying, ensuring compliance.

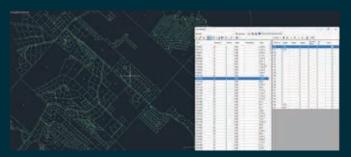

COGO Tools

Easily perform coordinate geometry operations for accurate site calculations.

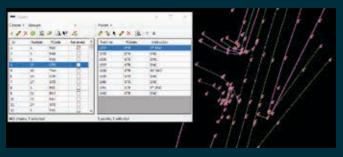

Surface Modeling

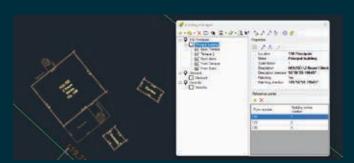

Create precise 3D models of terrain from your survey data.

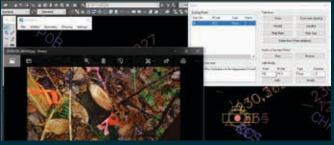

Automated Parcels Generation

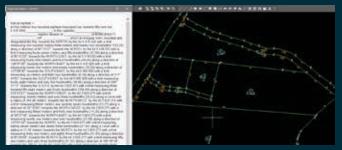

Connectivity Tools

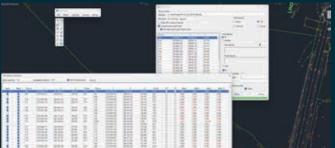

Building Management

Note Management

Automatic Technical Documentation

Validation Process

ABOUT US

ADVANCED DATA ANALYSIS TOOLS SINCE 1987

At Geo-Plus, we specialize in advanced data analysis tools that help manage and analyze large-scale spatial data, optimizing operations and decision-making processes. We've dedicated ourselves to empowering companies with cutting-edge software solutions. Our intuitive tools streamline workflows, enhance precision, and ensure regulatory compliance, leveraging the power of digital twin technology and LiDAR data. With decades of expertise, we help utilities create safer, resilient, and sustainable infrastructure networks, meeting community needs now and in the future.
