

FOR IMMEDIATE RELEASE

MEPA Packaging to Showcase Turnkey Bottling, Automation and Moulding Solutions at Saudifood Manufacturing 2026

Dubai-based engineering specialist exhibits at Stand 14-J1, Jeddah Superdome, 27–29 September 2026

JEDDAH, SAUDI ARABIA — MEPA Packaging will exhibit at Saudifood Manufacturing 2026, taking place at the Jeddah Superdome from 27 to 29 September 2026. The company will present its full portfolio of turnkey packaging, bottling, automation and quality control solutions for the food, beverage, pharmaceutical and industrial sectors at Stand 14-J1.

MEPA Packaging is a Dubai-based engineering and industrial solutions company that designs, supplies and commissions complete production lines. Rather than selling equipment in isolation, MEPA takes projects from initial engineering consultancy and equipment specification through project management, installation, commissioning and long-term after-sales support — giving manufacturers a single point of accountability for the entire line.

What MEPA will present in Jeddah

Visitors to Stand 14-J1 will see solutions spanning the complete packaging value chain. These include **complete bottling and filling lines** for water, beverages, edible oils and liquid products, engineered as integrated systems from rinsing through to palletising; **conveying and material handling systems** covering air, mat-top and modular belt conveyors for containers, cases and pallets; and **accumulation and lane divider systems** that decouple line sections to protect overall equipment effectiveness during changeovers and short stoppages.

The company will also showcase **thermal treatment equipment** including tunnel pasteurisers and coolers for beverages, dairy and liquid foods, engineered for uniform thermal profiles and controlled energy and water consumption; **PET preform, closure and blow moulds**, together with hot runners and spare parts for container and cap production; and **automation, control panel building and project management** services covering PLC and HMI programming, line integration and inspection systems.

“Saudifood Manufacturing is where the Kingdom’s food and beverage producers come to solve real production problems, not just to look at machines. That suits the way we work. Our value is in taking responsibility for the complete line — specifying it correctly, integrating it properly, commissioning it on schedule and supporting it for years afterwards. We are looking forward to sitting down with manufacturers in Jeddah and talking through their actual bottlenecks, capacity targets and expansion plans.”

Issam Chebbo, Sales Director, MEPA Packaging

A platform aligned with MEPA’s core sectors

Saudifood Manufacturing 2026 moves to Jeddah for its latest edition, co-located with The Saudifood Show. The event covers ingredients, processing, packaging, supply chain solutions and control and automation —

four of which map directly onto MEPA's exhibiting categories. Jeddah is Saudi Arabia's commercial gateway on the Red Sea and home to the Kingdom's largest specialised food cluster, placing the show close to the manufacturers, distributors and investors driving production growth.

Manufacturers, plant managers, project engineers, consultants and distributors are invited to visit Stand 14-J1 to discuss line upgrades, capacity expansion, new plant projects and aftermarket support. Meetings can be arranged in advance through the contact details below.
