

GEOTRAC

Unified Fleet Intelligence. Operational Control. In Real Time.

Powered by Tontrac

Geotrac delivers real-time visibility and deep operational insight across your operational fleet - transforming fragmented tracking, fuel, and operational data into a single, trusted source of truth.

WHAT GEOTRAC DELIVERS

Real-Time Fleet Visibility with Load Data

Continuous oversight across your entire fleet from one operational view.

- Combine different Subcontractors into one Operational View
- Live vehicle tracking across multiple sites, routes and projects
- Load and trip status
- Idle time monitoring and utilisation insights
- Geofence alerts and route compliance monitoring

Automated, Controlled Operations

Reduce manual intervention and operational friction through built-in automation.

- Route automation using live tracker and weighbridge data
- Automated trip creation, progress monitoring, and client updates
- Real-time exception alerts that drive immediate action
- 24/7 Control Room Support as an extension of your team

Violation Monitoring & Access Control

Detect and respond to operational risk before it escalates.

- Automated Route deviation alerts
- Automated Parking violations and black-site detection
- Geofence-based access control and compliance monitoring
- Deviation management and support by 24/7 Control Room

Move Beyond Fleet Challenges

Most fleets still operate reactively.

Responding to breakdowns, fuel losses, and delays after the loss of value. Disconnected systems with no load insight, manual reporting, and limited real-time visibility make operational control challenging.

Geotrac replaces fragmented fleet management with live operational control.

By unifying and automating vehicle tracking and validation with load data, in a single platform, Geotrac enables teams to act in real time - reducing risk, improving efficiency, and protecting margins.

Measure the Impact

Reduce Fuel Costs

Identify irregular usage, reduce shrinkage, and prevent theft through real-time fuel monitoring and analytics.

Improve Security

Live location tracking, tamper alerts, and camera integration enhance asset and personnel protection.

Boost Operational Efficiency

Eliminate blind spots across vehicles, routes, and subcontractors with one real-time operational view.

Enable Informed Decision-Making

Leverage historical data and meaningful metrics to plan smarter, optimise utilisation, and scale with confidence.

POD & Delivery Management

Coordinate and validate deliveries directly from Control Room.

- Centralised delivery coordination
- Verifiable proof of delivery
- Reduced disputes and accelerated reconciliation

Subcontractor & Fleet Control

Maintain visibility and accountability across mixed fleets - regardless of tracking provider.

- Performance monitoring
- Downtime tracking and fleet rosters
- Driver induction and compliance status
- One operational view across all transport partners

Day-to-Day Operational Management

Manage fleet operations from a single platform.

- Fuel usage and expense monitoring
- Inspections, service intervals, and breakdown tracking
- Licenses, permits, and compliance management

Financial Intelligence That Drives Action

Turn operational data into financial insight.

- Cost-per-kilometre analysis
- Fuel usage versus revenue ratios
- Historical performance trends for forecasting and planning
- Evidence-based decisions backed by operational data

GEOTRAC

INTEGRATE

Geotrac integrates with Live tracking hardware |
Fuel sources and sensors | Weighbridge systems |
and Onboard cameras

ACCESS

Geotrac is accessible from anywhere through Desktop or
Mobile, providing remote fleet visibility

TRUST

Geotrac works off live, validated telemetry in real time,
providing operational insights you can trust

Geotrac

One fleet. One system.

One source of truth.

The future of Fleet is Unified.
