PRESS RELEASE

SINOMA TO SHOWCASE GLOBAL MINING EXPERTISE AT EGYPT MINING FORUM 2026

With a mining heritage dating back to 1958, Sinoma has built extensive expertise in mining engineering, EPC, and industrial technologies, delivering projects across China and international markets throughout Asia, Africa, and the Middle East.

At Egypt Mining Forum 2026, Sinoma will showcase its capabilities across the mining value chain, from mine development and mineral processing to crushing, screening, bulk material handling, and integrated EPC solutions. The company brings together global engineering expertise, advanced technologies, and project execution capabilities to support the development of efficient, modern, and sustainable mining operations.

A key strength of Sinoma's mining equipment portfolio comes through HAZEMAG, Germany, its manufacturing arm and a globally recognised name in crushing and mineral processing technology. HAZEMAG provides advanced equipment and systems for crushing, feeding, conveying, drilling, and mineral separation, complementing Sinoma's engineering and EPC capabilities.

With an international presence and experience across multiple mining markets, Sinoma combines world-class engineering, innovative technologies, and high-performance equipment to deliver integrated solutions tailored to the evolving needs of the global mining industry.

Through its participation in Egypt Mining Forum 2026, Sinoma looks forward to connecting with mining companies, investors, government stakeholders, technology providers, and industry decision-makers to explore new opportunities for collaboration and contribute to the continued development of Egypt's mining sector.

Visitors to Egypt Mining Forum are invited to meet the Sinoma team and discover how its integrated engineering, EPC, and equipment capabilities can support the next generation of mining projects in Egypt and beyond.
